

ABSTRACT OF THE DISCLOSURE

An image data processing device includes: a basic image data acquisition device that acquires basic image data; a simplified image data generation device that generates simplified image data corresponding to the basic image data which has been acquired, a size of the simplified image data being smaller than that of the basic image data; a transmission device that transmits at least the basic image data to an external storage device; and an internal storage device that stores the simplified image data without storing the basic image data.
